Hierarchical Visual Navigation and Locomotion Framework

Completed Chapter 3 system and evaluation pipeline

Perception and Task

VIO Pose
(ideal or noisy)

Local Goal

Local Perception and Planning

RGB-D Point-cloud Projection → Local BEV Height and Obstacles → Dual-layer Cost Map Hard Collision + Soft Cost

FMM Reference Corridor → Footprint MPPI Trajectory Optimization → Velocity Command (vx, wz)

Locomotion Inputs

Desired Base Velocity

Proprioceptive State

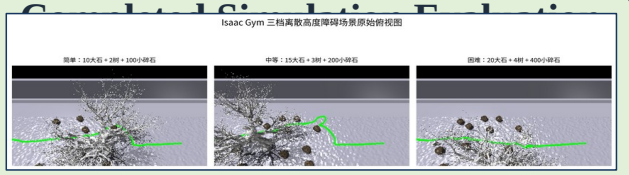

Historical Observations

HIMLoco Locomotion Controller

State and History Encoder → **HIMLoco Policy Network** → Joint Position Targets

Shared locomotion policy for all navigation planners

Completed Simulation Evaluation

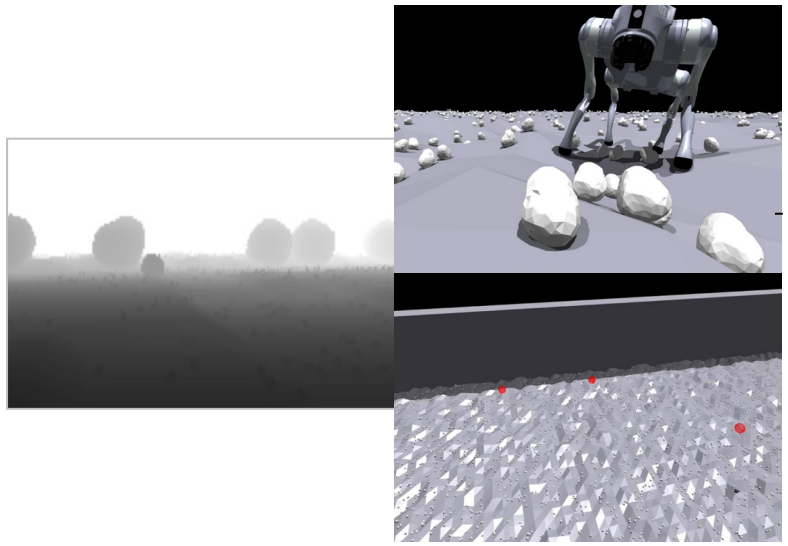

Three difficulty levels
30 fixed seeds per method

Internal ablation
Fixed FMM, Dual-layer FMM, Footprint MPPI

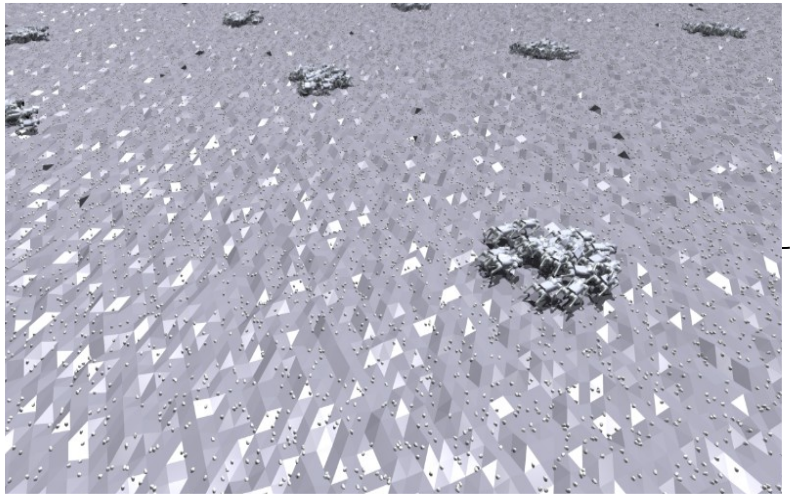

External comparison
iPlanner, PS-DWA, SAPF

VIO robustness
ideal, mild, medium, severe

750 formal closed-loop trials

Depth Camera Perception Driving

Reward Function Driving

Trajectory Planning

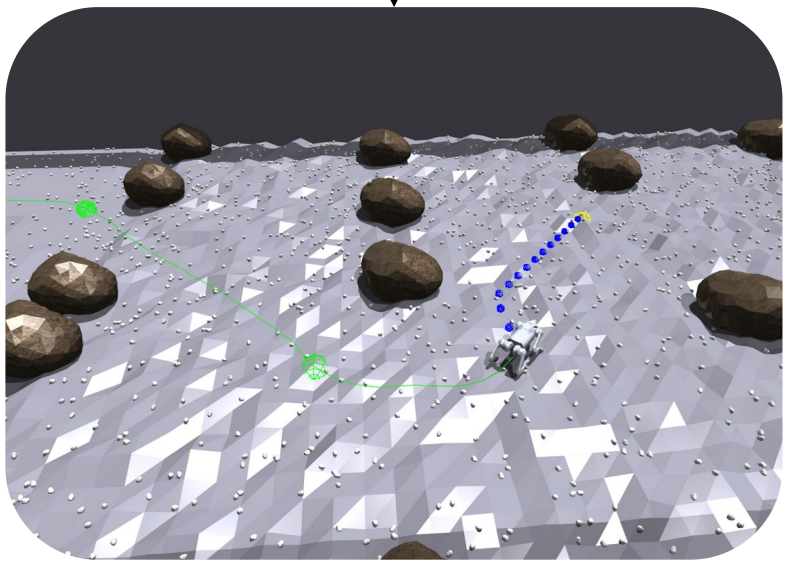

Reinforcement Learning

Navigation Controller

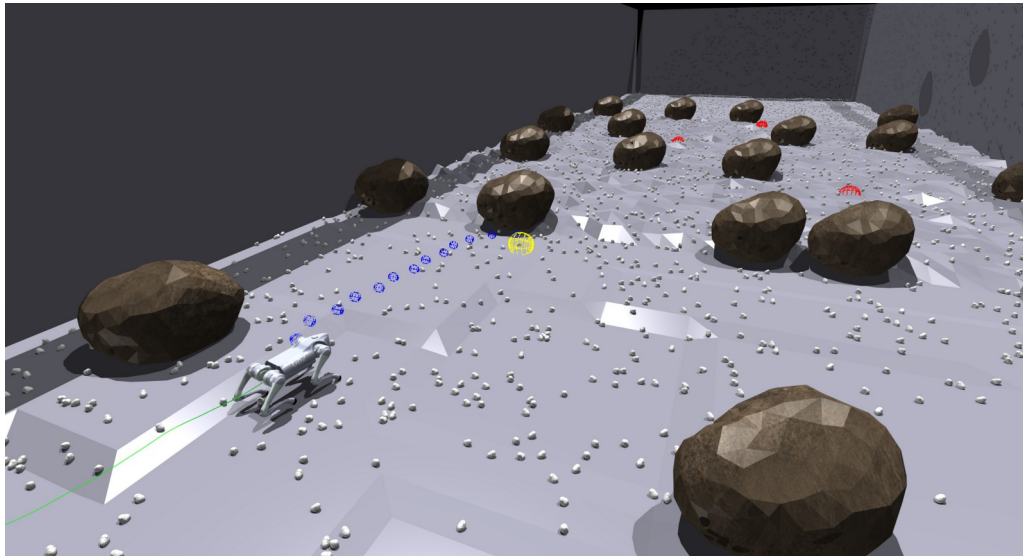

v_x, ω_{yaw}

Gait Controller

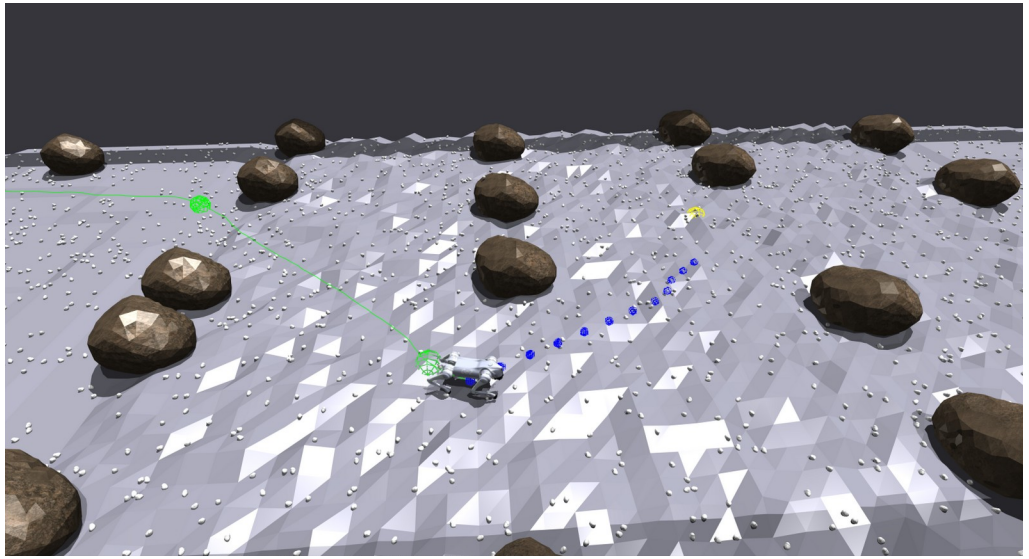

Joint Position Commands

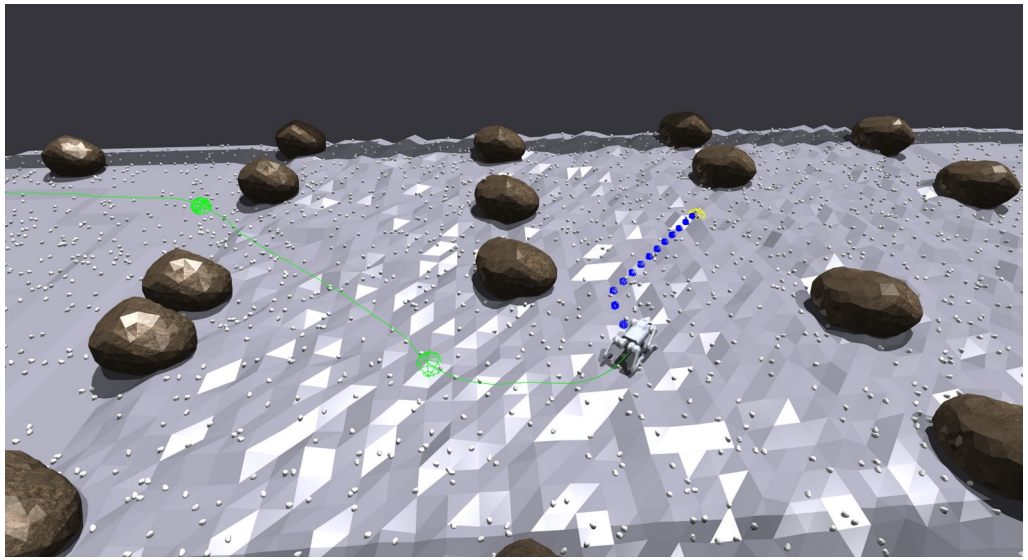

Autonomous Navigation

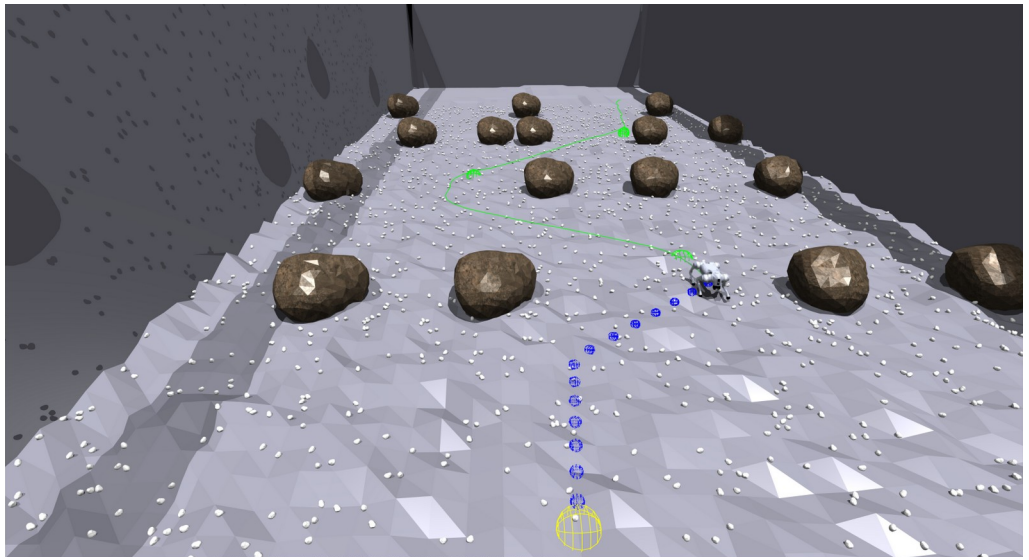

(a)Start Point — Waypoint A

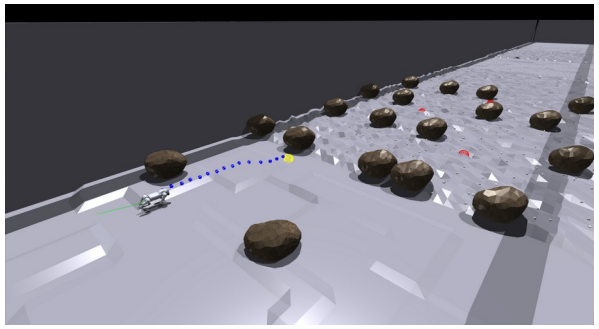

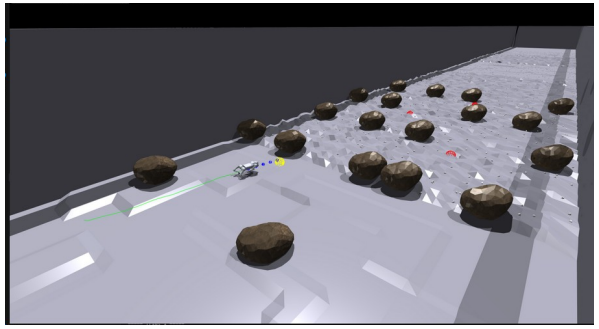

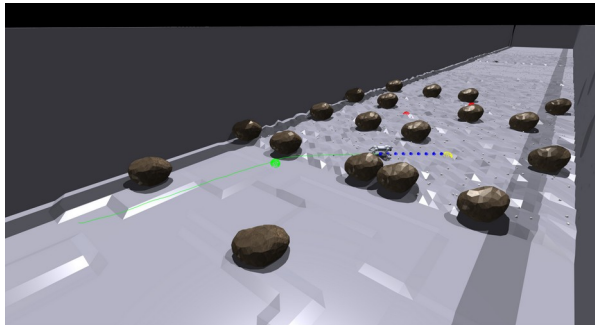

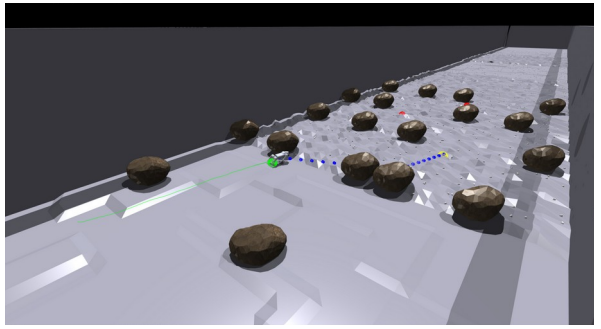

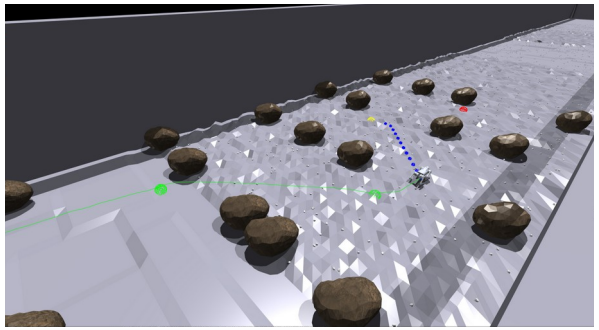

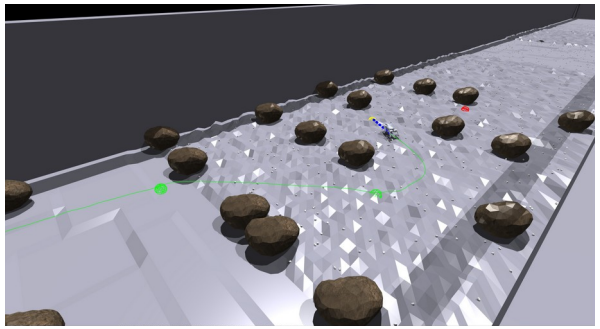

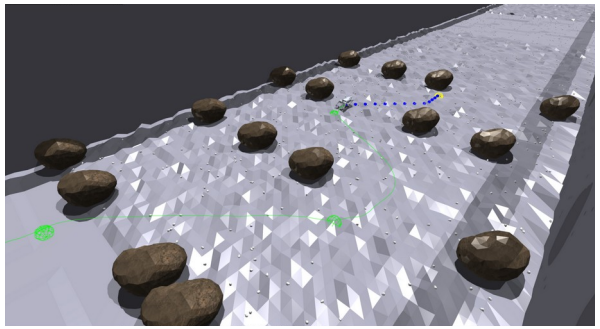

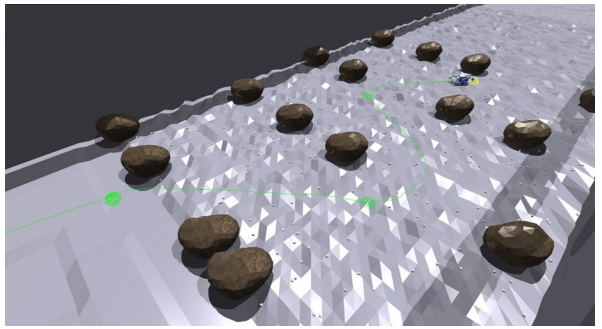

(b) Waypoint A — Waypoint B

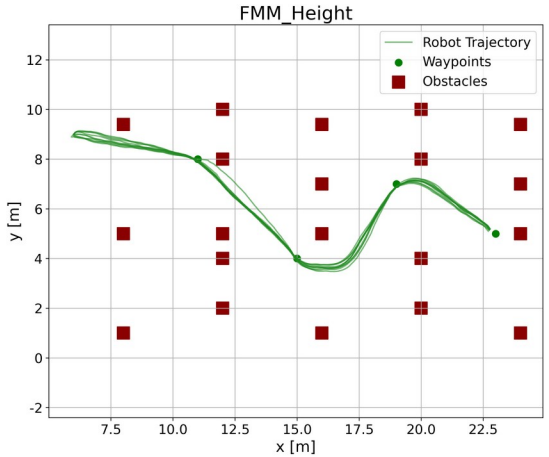

(c)Waypoint B — Waypoint C

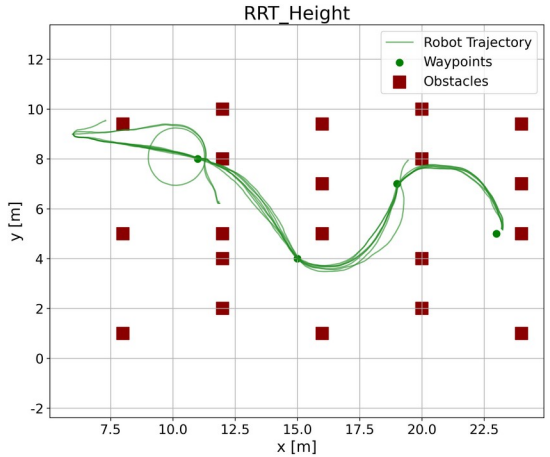

(d)Waypoint C — End Point
